triple 0.1 µm filter processed serum

Expiration Date: May 2022

Store Frozen at: -5°C to -20°C

Notice: We collect and process our serum rapidly at cold temperatures to yield the highest quality serum with excellent cell growth properties. This cold processing leaves some fibrinogen in the serum which may convert to fibrin upon storage, thawing, or heat-inactivation. Fibrin can cause the serum to look slightly turbid or may be visible as a flocculent material. This material does not adversely affect the growth performance characteristics of the serum.

The Fetal Bovine Serum used in Atlanta Biologicals' manufacturing process is certified as meeting all of the U.S.D.A requirements for donor animal health, country of origin, and traceability of the product.

Origin: The Fetal Bovine Serum is collected in U.S.D.A. approved slaughterhouses or in countries certified by the U.S.D.A. to be free of Foot and Mouth Disease (FMD), Bovine Spongiform Encephalopathy (BSE) and other exotic disease agents. All imported serum used for manufacturing purposes is tested and approved by the U.S.D.A. for distribution in the United States.

Donor Animals: All fetal blood is collected from fetuses derived from healthy animals. The donor dams must pass both ante- and post-mortem certified veterinary inspections before collection of the fetal blood.

Traceability: All of the Fetal Bovine Serum is traceable back to the date and location of collection.
